Fundamental biological and ecological constraint:

$$P = c M^{\alpha}$$

P = basal metabolic rate

M = organismal body mass

Fundamental biological and ecological constraint:

$$P = c M^{\alpha}$$

P = basal metabolic rate

M = organismal body mass

$$P = c M^\alpha$$

Prefactor c depends on **body plan** and **body temperature**:

$$P = c M^{\alpha}$$

Prefactor c depends on **body plan** and **body temperature**:

Birds	39–41 °C
Eutherian Mammals	36–38 °C
Marsupials	34–36 °C
Monotremes	30–31 °C

What one might expect:

$$\alpha = 2/3$$

What one might expect:

$\alpha = 2/3$ because ...

- Dimensional analysis suggests an energy balance surface law:

$$P \propto S \propto V^{2/3} \propto M^{2/3}$$

What one might expect:

$\alpha = 2/3$ because ...

- ▶ Dimensional analysis suggests an energy balance surface law:

$$P \propto S \propto V^{2/3} \propto M^{2/3}$$

- ▶ **Lognormal fluctuations:**
Gaussian fluctuations in $\log P$ around $\log cM^\alpha$.

What one might expect:

$\alpha = 2/3$ because ...

- ▶ Dimensional analysis suggests an energy balance surface law:

$$P \propto S \propto V^{2/3} \propto M^{2/3}$$

- ▶ **Lognormal fluctuations:**
Gaussian fluctuations in $\log P$ around $\log cM^\alpha$.
- ▶ Stefan-Boltzmann relation for radiated energy:

$$\frac{dE}{dt} = \sigma \varepsilon S T^4$$

The prevailing belief of the church of quarterology

$$\alpha = 3/4$$

$$P \propto M^{3/4}$$

The prevailing belief of the church of quarterology

$$\alpha = 3/4$$

$$P \propto M^{3/4}$$

Huh?

Related putative scalings:

- ▶ number of capillaries $\propto M^{3/4}$
- ▶ time to reproductive maturity $\propto M^{1/4}$
- ▶ heart rate $\propto M^{-1/4}$
- ▶ cross-sectional area of aorta $\propto M^{3/4}$
- ▶ population density $\propto M^{-3/4}$

1840's: Sarrus and Rameaux first suggested $\alpha = 2/3$.

1883: Rubner found $\alpha \simeq 2/3$.

- ▶ $d = 4$ gives $\alpha = 3/4$
- ▶ So we need another dimension...
- ▶ Obviously, a bit silly.

Building on the surface area idea:

- ▶ McMahon (70's, 80's): Elastic Similarity
- ▶ Idea is that organismal shapes scale allometrically with $1/4$ powers (like nails and trees...)

Building on the surface area idea:

- ▶ McMahon (70's, 80's): Elastic Similarity
- ▶ Idea is that organismal shapes scale allometrically with $1/4$ powers (like nails and trees...)
- ▶ Appears to be true for ungulate legs.

Building on the surface area idea:

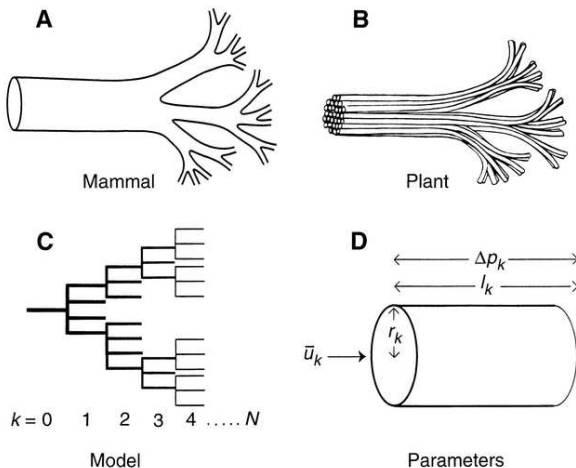

- ▶ McMahon (70's, 80's): Elastic Similarity
- ▶ Idea is that organismal shapes scale allometrically with $1/4$ powers (like nails and trees...)
- ▶ Appears to be true for ungulate legs.
- ▶ Metabolism and shape never properly connected.

Nutrient delivering networks:

- ▶ 1960's: Rashevsky considers blood networks and finds a $2/3$ scaling.

Nutrient delivering networks:

- ▶ 1960's: Rashevsky considers blood networks and finds a $2/3$ scaling.
- ▶ 1997: West *et al.*^[11] use a network story to find $3/4$ scaling.

Nutrient delivering networks:

West et al.'s assumptions:

- ▶ hierarchical network
- ▶ capillaries (delivery units) invariant
- ▶ network impedance is minimized via evolution

Nutrient delivering networks:

West et al.'s assumptions:

- ▶ hierarchical network
- ▶ capillaries (delivery units) invariant
- ▶ network impedance is minimized via evolution

Claims:

- ▶ $P \propto M^{3/4}$
- ▶ networks are fractal
- ▶ quarter powers everywhere

Impedance measures:

Poiseuille flow (outer branches):

$$Z = \frac{8\mu}{\pi} \sum_{k=0}^N \frac{\ell_k}{r_k^4 N_k}$$

Pulsatile flow (main branches):

$$Z \propto \sum_{k=0}^N \frac{h_k^{1/2}}{r_k^{5/2} N_k}$$

References

Not so fast . . .

Actually, model shows:

- ▶ $P \propto M^{3/4}$ does not follow for pulsatile flow
- ▶ networks are not necessarily fractal.

Not so fast . . .

Actually, model shows:

- ▶ $P \propto M^{3/4}$ does not follow for pulsatile flow
- ▶ networks are not necessarily fractal.

Do find:

- ▶ Murray's cube law (1927) for outer branches:

$$r_0^3 = r_1^3 + r_2^3$$

- ▶ Impedance is distributed evenly.
- ▶ Can still assume networks are fractal.

Connecting network structure to α

1. Ratios of network parameters:

$$R_n = \frac{n_{k+1}}{n_k}, \quad R_\ell = \frac{\ell_{k+1}}{\ell_k}, \quad R_r = \frac{r_{k+1}}{r_k}$$

River networks

Conclusion

References

- ▶ View river networks as collection networks.
- ▶ Many sources and one sink.
- ▶ Assume ρ is constant over time:

$$V_{\text{net}} \propto \rho V^{(d+1)/d} = \text{constant} \times V^{3/2}$$

- ▶ View river networks as collection networks.
- ▶ Many sources and one sink.
- ▶ Assume ρ is constant over time:

$$V_{\text{net}} \propto \rho V^{(d+1)/d} = \text{constant} \times V^{3/2}$$

- ▶ Network volume grows faster than basin 'volume' (really area).

- ▶ View river networks as collection networks.
- ▶ Many sources and one sink.
- ▶ Assume ρ is constant over time:

$$V_{\text{net}} \propto \rho V^{(d+1)/d} = \text{constant} \times V^{3/2}$$

- ▶ Network volume grows faster than basin 'volume' (really area).
- ▶ **It's all okay:**
Landscapes are $d=2$ surfaces living in $D=3$ dimension.
- ▶ Streams can grow not just in width but in depth...

Hack's law

- ▶ Volume of water in river network can be calculated by adding up basin areas
- ▶ Flows sum in such a way that

$$V_{\text{net}} = \sum_{\text{all pixels}} a_{\text{pixel } i}$$

- ▶ Hack's law again:

$$\ell \sim a^h$$

- ▶ Can argue

$$V_{\text{net}} \propto V_{\text{basin}}^{1+h} = a_{\text{basin}}^{1+h}$$

where h is Hack's exponent.

- ▶ \therefore minimal volume calculations gives

$$h = 1/2$$

Geometric argument

- ▶ Banavar et al.'s approach^[1] is okay because ρ really is constant.

Geometric argument

- Banavar et al.'s approach^[1] is okay because ρ really is constant.

From Banavar et al. (1999)^[1]

Geometric argument

- ▶ Banavar et al.'s approach^[1] is okay because ρ really is constant.
- ▶ **The irony:** shows optimal basins are isometric

From Banavar et al. (1999)^[1]

Geometric argument

- ▶ Banavar et al.'s approach^[1] is okay because ρ really is constant.
- ▶ **The irony:** shows optimal basins are isometric
- ▶ Optimal Hack's law: $a \sim \ell^h$ with $h = 1/2$

From Banavar et al. (1999)^[1]

Geometric argument

- ▶ Banavar et al.'s approach^[1] is okay because ρ really is constant.
- ▶ **The irony:** shows optimal basins are isometric
- ▶ Optimal Hack's law: $a \sim \ell^h$ with $h = 1/2$
- ▶ (Zzzzzz)

Conclusion

References

- ▶ Supply network story consistent with dimensional analysis.
- ▶ Isometrically growing regions can be more efficiently supplied than allometrically growing ones.

- ▶ Supply network story consistent with dimensional analysis.
- ▶ Isometrically growing regions can be more efficiently supplied than allometrically growing ones.
- ▶ Ambient and region dimensions matter ($D = d$ versus $D > d$).

- ▶ Supply network story consistent with dimensional analysis.
- ▶ Isometrically growing regions can be more efficiently supplied than allometrically growing ones.
- ▶ Ambient and region dimensions matter ($D = d$ versus $D > d$).
- ▶ Deviations from optimal scaling suggest inefficiency (e.g., gravity for organisms, geological boundaries).
