Instantons & Lagrangians in Manifolds w/ V.C.P. [Vector Cross Product].

Naichung Conan Leung.

Joint work with Jae Hyouk Lee.

)03
A

- Vector Cross Product (V.C.P.)
  - Kähler / Symplectic Manifold

    $\partial\begin{pmatrix}\text{Holomorphic}\\ \text{Curve}\end{pmatrix} \subset$ Lagrangian Submanifold.
  - G_2 - manifold.

    $\partial\begin{pmatrix}\text{Associative}\\ \text{submanifold}\end{pmatrix} \subset$ Coassociative Submanifold.

- $\mathbb{C}$ - V. C. P.
  - Calabi - Yau Manifold.

    $\partial(SLag_\theta) \subset$ Complex Hypersurfa[ce] and $SLag_{\theta+\pi/2}$.
  - Hyperkähler Manifold.

    $\partial\begin{pmatrix}\text{Holomorphic}\\ \text{Curve}\end{pmatrix} \subset$ Complex Lagrangia[n] submanifold.

§ Symplectic Geometry

[Review].

(M^{2n}, ω) $\qquad \omega \in \Omega^2(M)$.

$$\begin{cases} d\omega = 0 \\ \omega > 0. \end{cases}$$

Example. $\quad M = \mathbb{C}^n$

$\omega = dx^1 \wedge dy^1 + \dots\dots + dx^n \wedge dy^n$

metric

$g = (dx^1)^2 + (dy^1)^2 + \dots\dots + (dx^n)^2 + (dy^n)^2$

complex str.

$J\left(\frac{\partial}{\partial x^j}\right) = \frac{\partial}{\partial y^j} \qquad \forall j.$

complex structure.
(1-fold V.C.P.)

$\omega \in \Omega^2(M)$

$J : T_M \to T_M, \ J^2 = -$

via metric

$\underline{\omega(u, v) = g(Ju, v).}$

(M, ω, J, g) Almost Kähler mfd.

$$(M^{2n}, g, \omega, J)$$

Definition: $A^2 \subset M$

<u>Holomorphic Curve</u> / <u>Instanton</u>

if A preserved by J.

[$\underset{\text{Wirtinger}}{\Longleftrightarrow}$ A calibrated by ω, i.e. $\omega|_A = \nu_A$]

[$\Longrightarrow$ Absolute minimum area.]

$$\mathrm{Area}(A) = \int_A [\omega].$$

(topological)

Remark: Boundary value problem

$$\partial A \subset C \subset M$$

$$\omega|_C = 0.$$

$$(M^{2n}, g, \omega, J)$$

Definition: $C^n \subset M^{2n}$

<u>Lagrangian</u> submanifold if

$$\omega|_C = 0$$

$$\dim C = \frac{1}{2} \dim M.$$

Remark:

$\#\{\text{instantons} : A^2 \subset M\}$

(i) $\partial A = \phi$ $\rightsquigarrow$ Gromov-Witten Invariants

(ii) $\partial A \subset C$ $\rightsquigarrow$ Fukaya-Floer Category.

§. Vector Cross Product.

Example : $(\mathbb{R}^3, \times)$.
Example : (M^{2n}, J).

Definition : (M^m, g) Riemannian manifold.
[Gray].

$$\chi : \Lambda^r T_M \longrightarrow T_M \qquad \underline{\text{r-fold VCP}}$$

if. (i) $\chi(v_1, \ldots\ldots, v_r) \perp v_1$

(ii) $v_1, \ldots\ldots, v_r$: orthonormal

$\Rightarrow |\chi(v_1, \ldots\ldots, v_r)| = 1$

(i)$\Leftrightarrow$(i)' $\varphi(v_1, \ldots\ldots, v_r, v_{r+1}) \triangleq \langle \chi(v_1, \ldots, v_r), v_{r+1} \rangle$

then $\varphi \in \Omega^{r+1}(M)$.

(iii) $d\varphi = 0$.

[$\widetilde{\text{(iii)}}$ $\nabla \varphi = 0$ $\underline{\text{Integrable VCP}}$]

(M^m, g) w/ r-fold VCP.

$$\varphi \in \Omega^{r+1}(M) \qquad\qquad \chi : \Lambda^r T_M \longrightarrow T_M$$

$$\underline{\varphi(v_1, \dots, v_r, v_{r+1}) = \langle \chi(v_1, \dots, v_r),\ v_{r+1} \rangle}.$$

Def$^{\underline{n}}$. $A^{r+1} \subset M^m$ __instanton__

if A preserved by χ

$\left[\overset{\text{Lemma.}}{\Longleftrightarrow} \ A \text{ calibrated by } \varphi \right]$

Def$^{\underline{n}}$. $C^k \subset M^m$ __Lagrangian__

if $\begin{cases} \varphi|_C = 0 \\ \dim C = k = \dfrac{n+r-1}{2}. \end{cases}$

Remark: $\dim C > \dfrac{n+r-1}{2} \Rightarrow \varphi|_C \neq 0.$

§ (Unparametrized) Loop Space Interpretation.

$$(M\ ,\ g) \qquad \varphi \in \Omega^{r+1}(M).$$

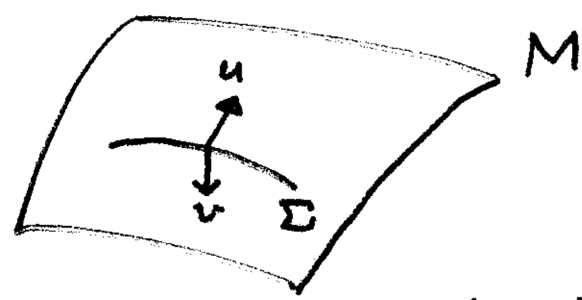
Fix ANY. Σ^{r-1}

$$\mathcal{L}_\Sigma M \triangleq \mathrm{Map}(\Sigma, M)_{\text{embed}} \Big/ \mathrm{Diff}^+(\Sigma).$$

Transgression $\rightarrow$

$$\omega_{\mathcal{L}_\Sigma M} = \int_\Sigma \varphi \quad \in \Omega^2(\mathcal{L}_\Sigma M).$$

That is,



$u, v \in \Gamma(N_{\Sigma/M}).$

$$\omega_{\mathcal{L}_\Sigma M}(u, v)$$
$$= \int_\Sigma \iota_{u \wedge v} \varphi$$

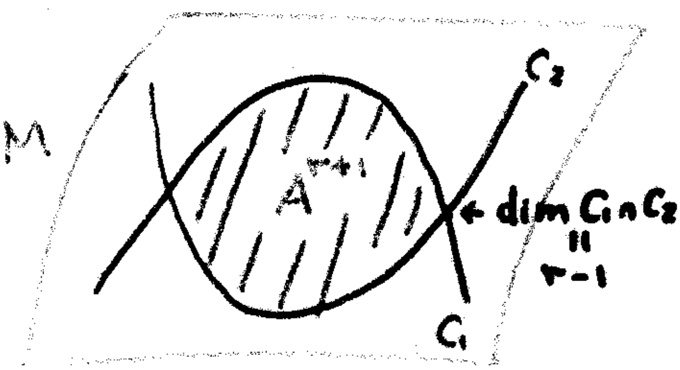
Theorem. (M^n, g) $\quad \varphi \in \Omega^{r+1}(M)$

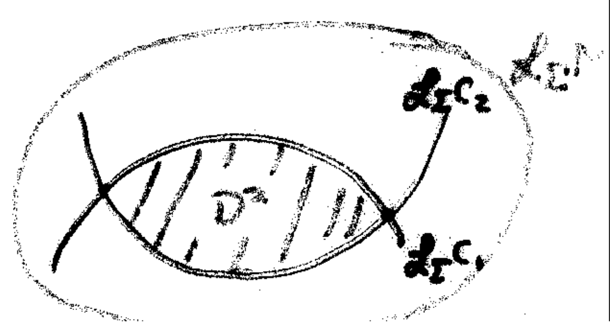
$\rightsquigarrow \quad \omega_{\mathcal{L}_\Sigma M} \in \Omega^2(\mathcal{L}_\Sigma M).$

(1) φ : r-fold VCP on M $\iff$ $\omega_{\mathcal{L}_\Sigma M}$: 1-fold VCP on $\mathcal{L}_\Sigma M$. (i.e. Symplectic).

(2) $C \subset M$ φ-Lagrangian $(\dim C = (n+r-1)/2)$. $\iff$ $\mathcal{L}_\Sigma C \subset \mathcal{L}_\Sigma M$ Lagrangian

(3) $D^2 \approx \Sigma \subset M$, $D^2 = A^{r+1}$ instanton $\iff$ $D^2 \subset \mathcal{L}_\Sigma M$ instanton (i.e. holomorphic curve).





§ Examples / Classification.

1° Kähler / Symplectic Manifolds.

($r = 1$).

$$(M^{2m}, \chi, \varphi) = (M, J, \omega)$$

cpx. str. — sympl. form.

- Instanton
- Lagrangian

(usual def$^{\underline{n}}$.).

2° Volume form ($r = n-1$)

(M^n, g) $\quad \varphi = \nu_M \in \Omega^n(M)$

$= \sqrt{\det(g_{ij})}\, dx^1 \wedge \cdots \wedge dx^n$.

- Instantons $A^n \underset{\text{open}}{\subseteq} M^n$ (domain in M

- Lagrangians $C^{n-1} \subset M^n$

  ||

  Hypersurfaces (

3° G_2-manifold $(r=2)$.

(M^7, g) $\qquad \varphi =: \Omega \in \Omega^3(M^7)$

e.g. $M^7 = X^6 \times S^1$

$\uparrow$ Calabi-Yau 3-fold.

$$\Omega_M = \mathrm{Re}\,\Omega_X + \omega_X \wedge d\theta$$

When $M^7 = \mathrm{Im}\,\mathbb{O}$

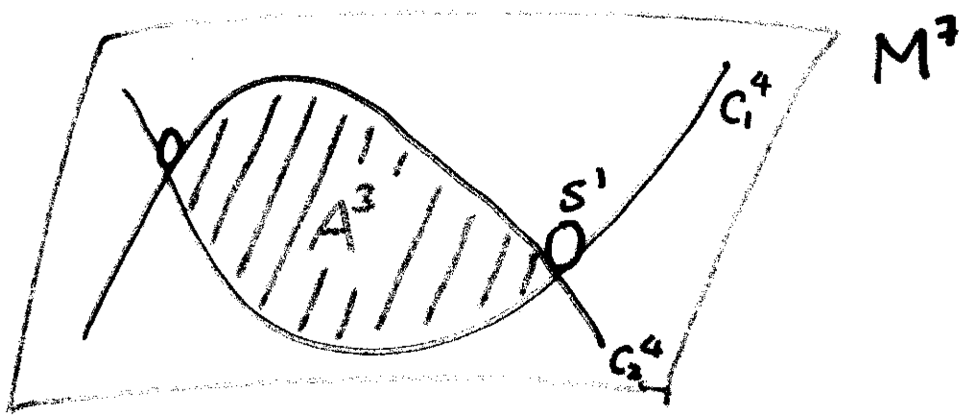
$$\chi(u, v) =: u \times v = \mathrm{Im}(u \cdot v)$$

(M^7, g, Ω) : G_2-mfd.

$$\Omega(u,v,w) = g(u \times v, w).$$

- Instanton $A^3 \subset M$ preserved by $\times$
  ॥ (calib. by Ω).
  Associative

- Lagrangian $C^4 \subset M$ $\Omega|_C = 0$
  ॥ (calib. by $*\Omega$).
  Coassociative.



Remark: Count A^3.
When $C_1 \sim C_2$. (L. - X.W. Wang)

$\# A^3$

$\approx$ # holo. curves in C_1^4 (+ bubbles).

$\overset{\text{Taubes}}{\approx}$ Seiberg-Witten Inv. of C_1.

4°. Spin(7)-manifold $(r=3)$

M^8.

[eg. $M^8 = \underset{G_2\text{-mfd.}}{Z^7} \times S^1$

$\varphi_M = \Omega_Z \wedge d\theta + *\Omega_Z$.

Example: $M = \mathbb{O}$

$$u \times v \times w = \chi(u, v, w) = \frac{1}{2}[u(\bar{v}w) - w(\bar{v}u)]$$

- Instanton $A^4 \subset M^8$ preserved by $\times$ (calib. by φ)
  $\|$
  Cayley

- Proposition : $\nexists$ φ-Lagrangian in any Spin(7)-manifold.

Remark : No other VCP — classification by Brown-Gray.

In fact, we can also allow

<u>$r = 0$</u>. i.e.

$$(M^n, g) \qquad \varphi \in \Omega^1(M)$$

$$\begin{cases} d\varphi = 0 \\ |\varphi| = 1. \end{cases}$$

Eg.

$$f : M \longrightarrow S^1 \qquad \text{Riemannian submersion.}$$

$$\varphi = f^*(d\theta).$$

- Instanton $A^1 \subset M$
  ||
  Gradient Flow Line.

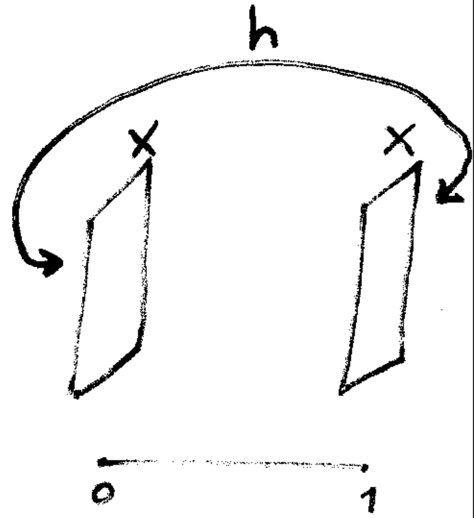
- Lagrangian ?

$$f : M^n \longrightarrow S^1$$

$$\Longleftrightarrow. \qquad M = X \times [0,1]/\sim$$

$$h : X \xrightarrow[\text{isometry}]{} X$$

(Mapping Cylinder).

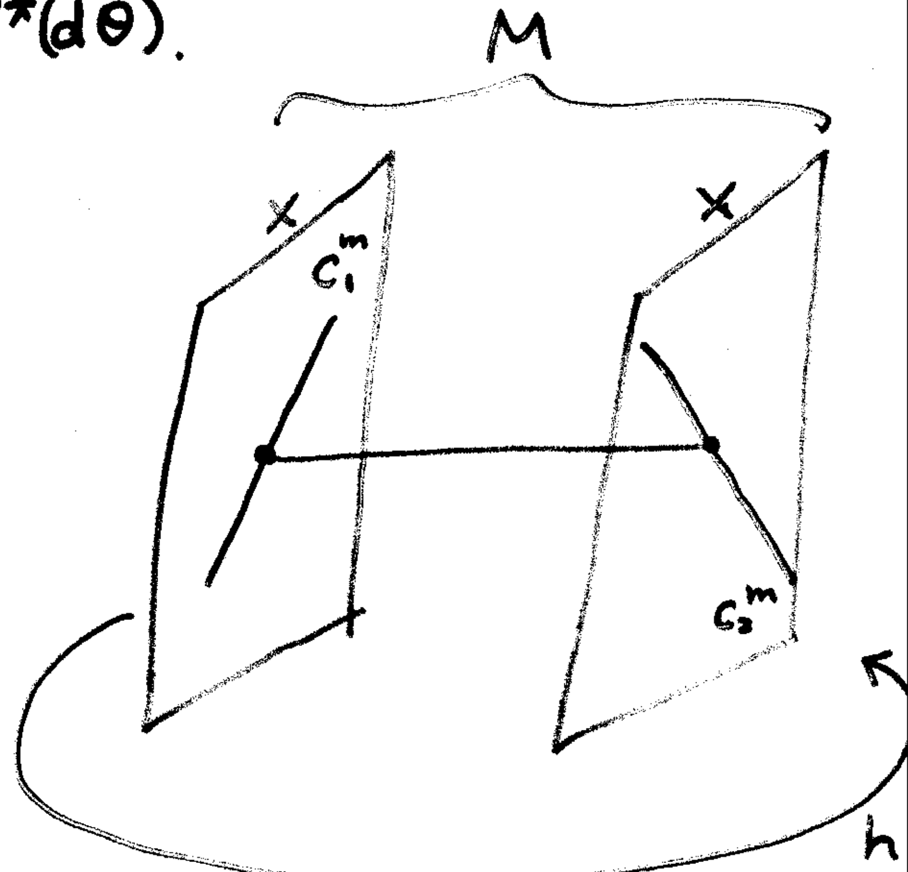


- Lagrangian.

$$C^m \subset X^{2m} \times \{t\} \quad \exists t.$$

[$r = 0$ Continue ....].

$$\begin{array}{ccc} M^{2m+1} & & \varphi \in \Omega^1(M). \\ {\scriptstyle f}\downarrow & & \| \\ S^1 & & f^*(d\theta). \end{array}$$



Instantons bounding $C_1 \cup C_2$

$$= \sum_{k=-\infty}^{\infty} \left(\# C_1 \cap h^k(C_2) \right) t^k.$$

<u>Remark:</u> (M^n, g), $\varphi \in \Omega^{r+1}(M)$

VCP BUT $\boxed{d\varphi \neq 0}$

Assume

(*)

$$|\iota_{u_1 \wedge \cdots \wedge u_{r+1}}(d\varphi)|^2 = 1 - |\varphi(u_1, \dots, u_{r+1})|^2$$

$\forall$ orthormal $u_1, \dots, u_{r+1}$.

- (*) $\Rightarrow$ $\mathbb{R}_+ \times M$ (cone).

  $(r+1)$-fold V.C.P.

  $\tilde{\varphi} = dt \wedge \varphi + t \wedge d\varphi$, $d\tilde{\varphi} = 0$

  $\tilde{g} = t^2 g_M + dt^2$.

-

r	M w/ (*)
0	Contact
1	Nearly C.Y. 3-fold.
2	Nearly G_2-mfd.
$n-1$	Volume form.

Remark (Continue)

(M^{2m+1}, g) $\quad \varphi \in \Omega^1(M)$ $\quad \boxed{r=0}$

$d\varphi$ satisfies $(*)$

$\Rightarrow M$: Contact.

- Instanton $\quad A^1 \subset M$

- Lagrangian $\quad C^m \subset M^{2m+1}$
  $\parallel$
  Legendrian

§ Complex V.C.P.

Definition: (M^{2n}, g, J). Kähler.

$$\varphi \in \Omega^{r+1,0}(M), \quad d\varphi = 0$$

satisfying

$$| \iota_{u_1 \wedge \dots \wedge u_r} \varphi | = 1$$

for any orthonormal $u_1, \dots, u_r \in T^{1,0}M$.

is called a <u>Complex Vector Cross Product</u>.

Classification Theorem (Lee-L.)

(M^{2n}, g, J), $\varphi \in \Omega^{r+1,0}(M)$

r-fold $\otimes$. $\mathbb{C}$. V.C.P.

$\Rightarrow$ (1). Calabi-Yau. ($r = n-1$).

φ = holomorphic Volume form

(2) Hyperkähler ($r = 1$).

φ = holomorphic Symplectic form.

Remark: $\nexists$ $\mathbb{C}$-analog. of G_2 or Spin(7) type V.C.P.

Remark: $d\varphi = 0 \iff \nabla\varphi = 0$ for $\mathbb{C}$-VCP.

(M^{2n}, J, g), $\varphi \in \Omega^{r+1,0}(M)$

$\mathbb{C}$VCP.

<u>Def$^{\underline{n}}$</u> (i) $A^{r+1} \subset M$ <u>Instanton</u>

if Calibrated by $\mathrm{Re}(e^{i\theta}\varphi)$

for some 'phase' θ.

(ii) $C^{2k} \subset M^{2n}$ <u>Lagrangian</u>

$k = (n+r-1)/2$ (of cx. type).

if $\varphi|_C = 0$.

Remark: $C \subset M$ Lagr. $\Rightarrow$ complex submfd.

046,
A

Def. Lagrangian of Real Type

$$(M^{2n}, g, J)$$

$$\omega \in \Omega^2(M) \qquad \varphi \in \Omega^{r+1,0}(M)$$

$C^n \subset M^{2n}$.

(i) $\omega|_C = 0$

(ii) $\mathrm{Re}(e^{i\theta}\varphi)|_C = 0$

real type

$C^{2k} \subset M^{2n}$

$\varphi|_C = 0$

complex type

Remark: Both are good boundary value for Instantons (Calib. by $\mathrm{Re}(e^{i\theta}\varphi)$).

Example $[r=1]$: <u>Hyperkähler</u>.

$$(M^{4m}, g, J, \omega = \omega_J)$$

$$\varphi \in \Omega^{2,0}(M)$$
$$\parallel$$
$$\omega_I + i\,\omega_K.$$

- Instanton. $A^2 \subset M$ calib. by $Re(e^{i\theta}\varphi)$.

  $\parallel$

  J_θ-holomorphic curve.

  $J_\theta = \cos\theta\, I + \sin\theta\, K$.

- Lagr. of Cx. Type. $C^{2n} \subset M^{4n}$. $\varphi|_C = 0$

  $\parallel$

  J- complex Lagr.

- Lagr. of Real Type. $C^{2n} \subset M^{4n}$ $\omega|_C = 0$, $Re(e^{i\theta}\varphi)|_C = 0$

  $\parallel$

  $J_{\theta+\pi/2}$-complex Lagr.

Example $[r = n-1]$ <u>Calabi-Yau</u>

$$(M^{2m}, g, J, \omega).$$

$\varphi \in \Omega^{n,0}(M)$ holo. vol. form.

- Instanton $A^m \subset M^{2m}$ Calib. by $\mathrm{Re}(e^{i\theta}\varphi)$.

  $\|$

  SLag w/ phase $= \theta$.

- Lagr. of $\mathbb{C}$-type $C^{2m-2} \subset M^{2m}$ $\varphi|_c = 0$

  $\|$

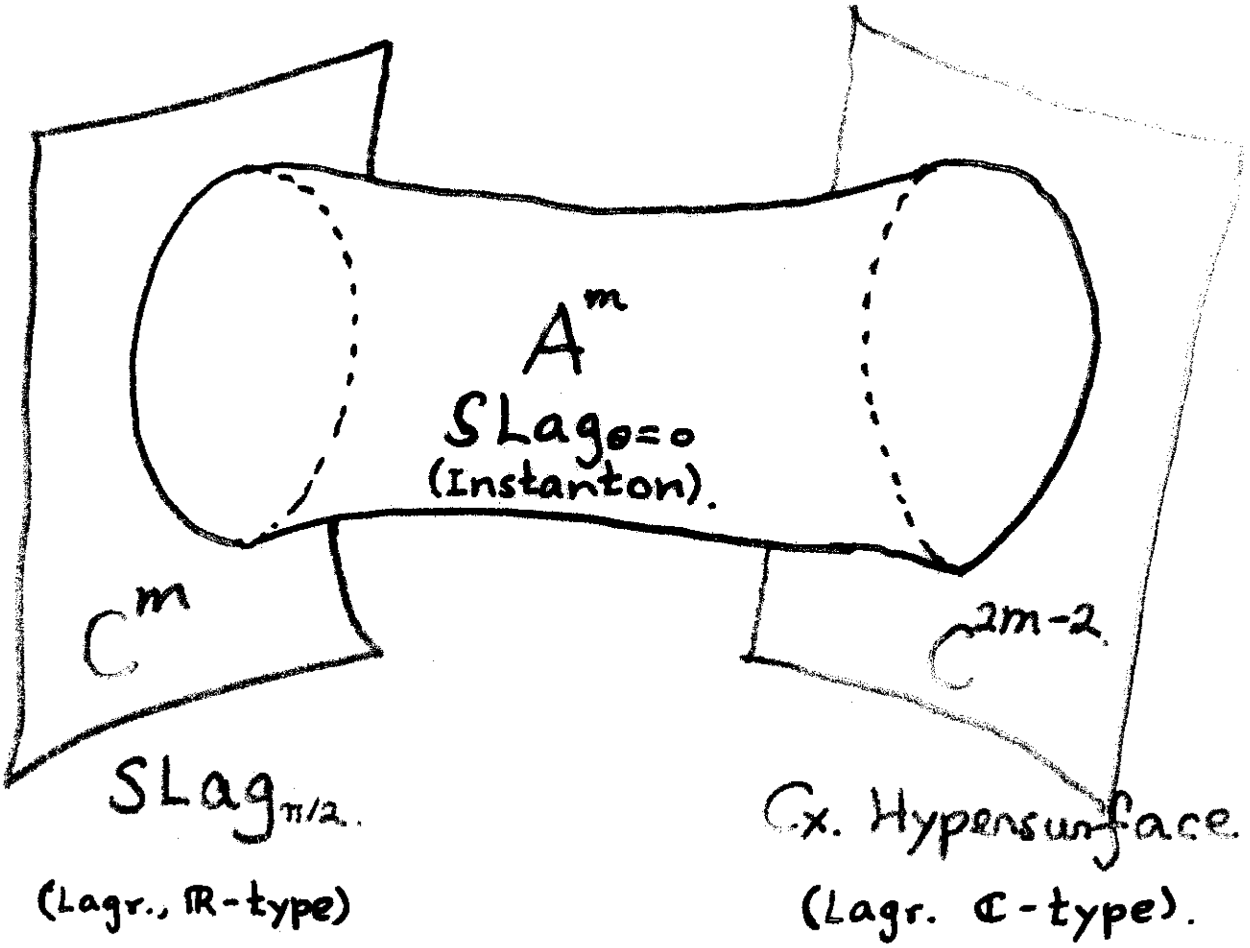
  Complex Hypersurface.

- Lagr. of $\mathbb{R}$-type $C^m \subset M^{2m}$ $\omega|_c = 0$ $\mathrm{Re}(e^{i\theta}\varphi)|_c = 0$

  $\|$

  SLag. w/ phase $= \theta + \frac{\pi}{2}$.

Remark: M^{2m} : C.Y.

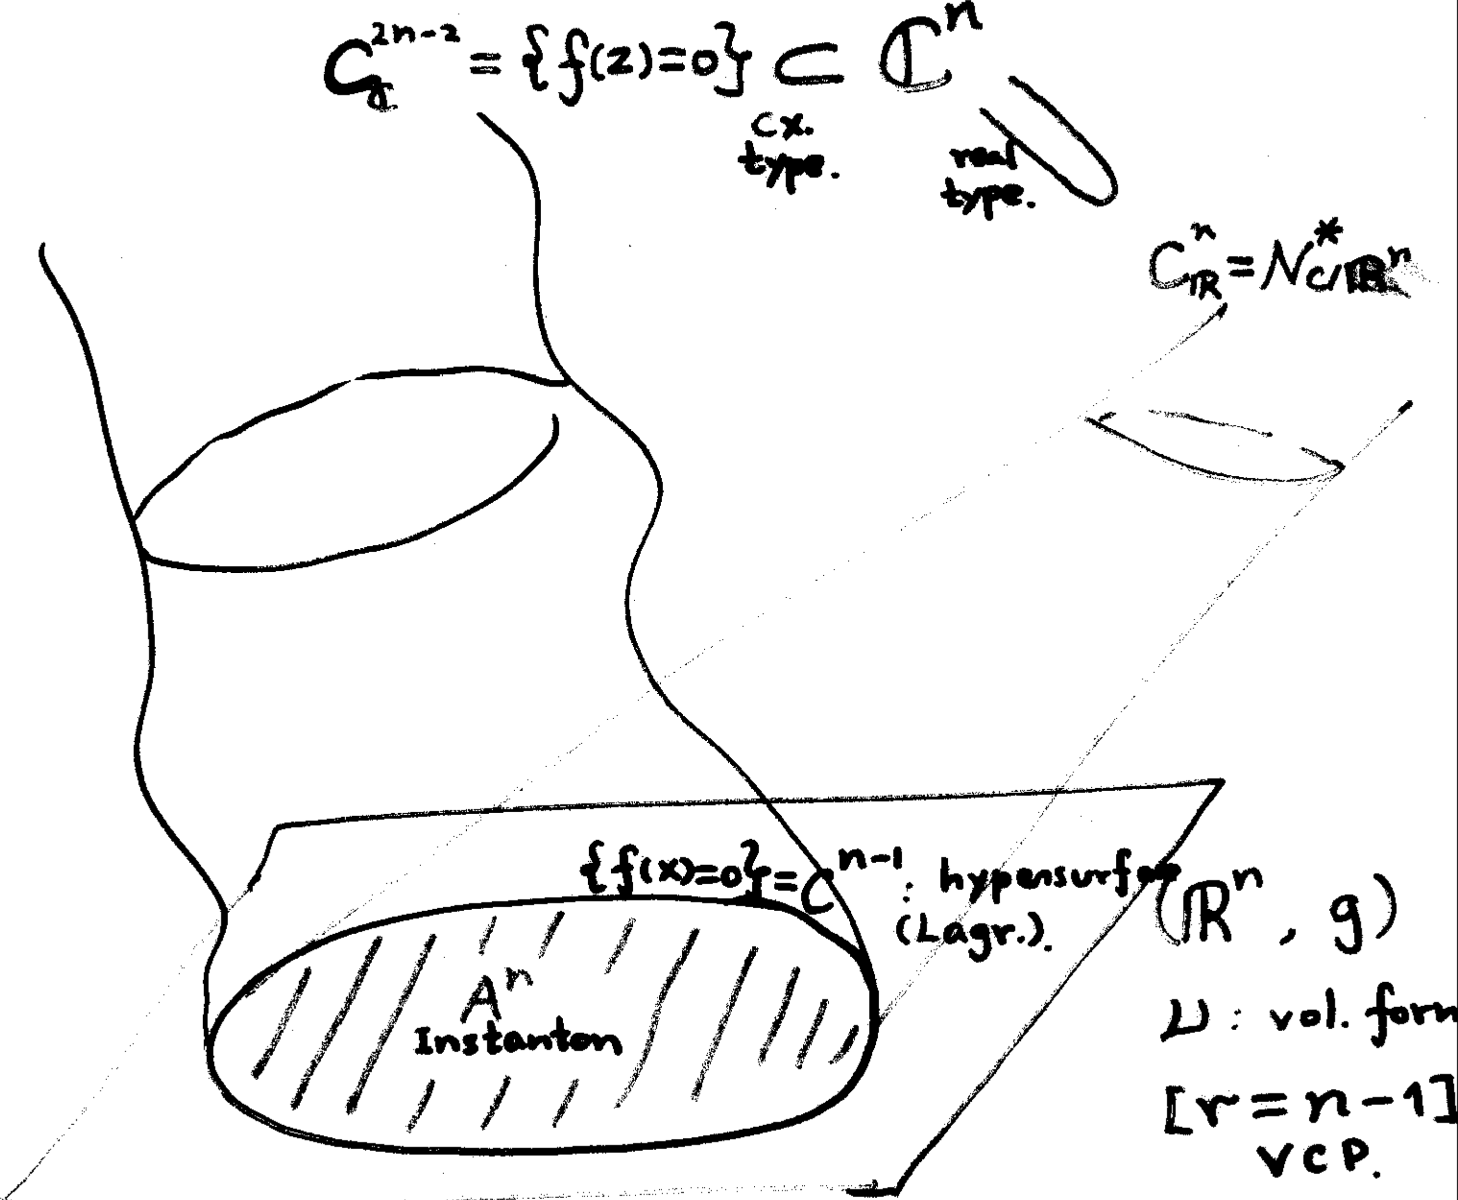


$SLag_0$ with boundary lying on $SLag_{\pi/2}$ (Dirichlet) or Cx. Hypersurface(Neuman

— Schoen's school.

(A. Butscher, W.Y. Qiu).

Remark: Motivation of Lagr. of $\mathbb{R}$ vs $\mathbb{C}$ type. (Complexification).



§ Loop Space Interpretations of $\mathbb{C}$. VCP.
