

At least 3 decades' research in travel behaviors

Cynthia Chen
University of Washington, Seattle

Background

The larger context

- *link to many grand problems of our society (e.g, energy consumption, air pollution, obesity, and quality of life...)*
- *matter directly individuals' upward “mobility”*
- *addressing these issues must engage human factors*

Supply based

Demand based

3 charges

- Provide guidance on the kinds and scale of policies needed
- Quantify the effect of policies
- Identify factors and mechanisms that fundamentally influence the course of a phenomenon

Major sub-fields

- movement patterns
- model development
- behavioral factors

macro-level demand models

O-D by mode and time of day

macro-level network assignment

micro-level vehicle interactions

Data

Household travel surveys

- **data of active solicitation**
- available at the national level and many metropolitan levels
- most often, cross-sectional survey (many subjects but one time point)
- contains three modules
 - household and person related (socio-demographics)
 - trip related (typically for 24 hours, or one day)
 - vehicle related

Household travel surveys

- Sampling
 - randomly selected from geographic subareas within the study region
 - oversampling typically done at subarea level or for specific populations
 - non-probability sampling as an option
- recruitment: first-class mail or telephone
- data retrieval: online instrument, paper-based, CATI
- GPS subsample sometimes available

NATIONAL HOUSEHOLD TRAVEL SURVEY

TRAVEL DIARY

At the beginning of my travel day (4:00 a.m.) I was:

☐ Home ☐ Some other place

WHERE did you go? (Name of place)	What TIME did you start and end each trip?		WHY did you go there?	HOW did you travel?	How FAR was it? (blocks or miles)
	Started at:	Arrived at:			
EXAMPLE: <i>West Park Theater</i>	<i>2:00 p.m.</i>	<i>2:55 p.m.</i>	<i>To see a movie</i>	<i>walk, bus, walk</i>	<i>6 miles</i>

The map on the right displays one of your travel events corresponding to the details below. You need to:

- Click on each **red** question mark to update that detail.
- Click on each **orange** item to either confirm or update that detail.

You can also **Insert** missing stops and/or **delete** stops that are not correct.

After each **red** and **orange** item is updated, it will turn **green**.

After ALL the **red** and **orange** items become **green**, you will see a **continue** link at the bottom of the page.

4:45 PM → 4:47 PM

Stay on "D"

Activity that best describes what you were doing? ?

4:47 PM → 5:02 PM

"D" → "E"

What means of travel did you use? ?

Which of the following household members traveled with you to the next place? ?

Is there a stop missing during this travel? If yes, please insert a stop by clicking **Insert**.

Insert A Stop

5:02 PM → 6:20 PM

Stay on "E"

If it was not a real stop, please delete this stop by clicking **Delete**.

Delete This Stop

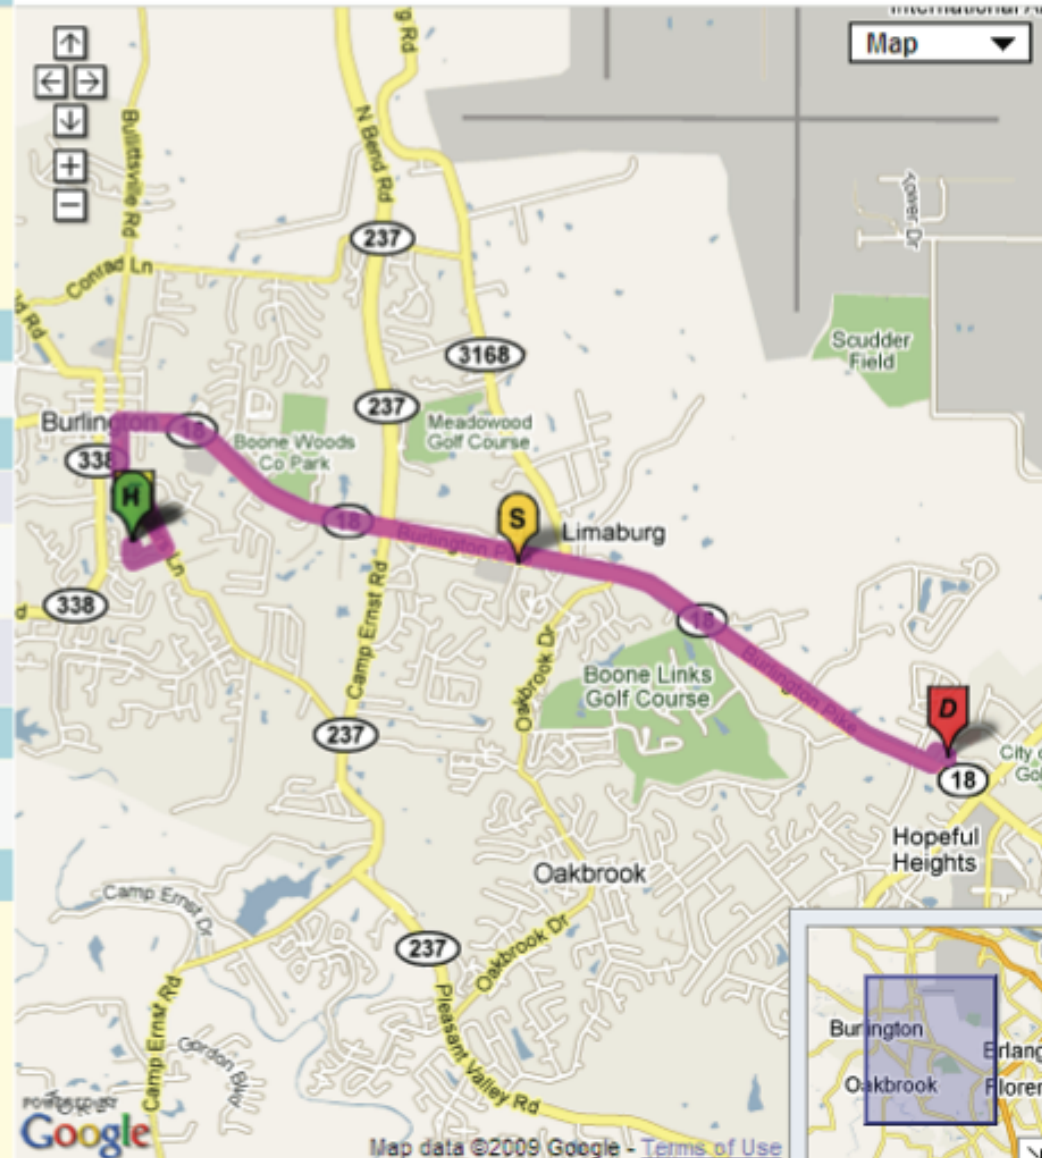

6:20 PM → 6:33 PM

"E" → Other Place

You may return to this travel at any time by clicking on the **green** numbered circle above.

Map

Sample records from a regional household travel survey.

hhid	pid	actno	ptype	depart	arrive	tripdur	actdur	Latitude	Longitude
1200	1	1	1	650	300		230	34 7 48.87 N	118 6 27.56 W
1200	1	2	2	1437	740	50	417	34 8 43.56 N	118 8 58.78 W
1200	1	3	1	259	1530	53	629	34 7 48.87 N	118 6 27.56 W

hhid, household id; pid, person id; actno, activity number; ptype, type of activity (1-home; 2-work); depart, departure time from the location of the corresponding activity (in military format: hhmm); arrive, arrival time at the location of the corresponding activity (in 24 h); tripdur, duration of the trip to arrive at the corresponding activity (in minutes); actdur, duration of the activity in minutes.

Recent/Current Projects

YEAR	AGENCY/PROJECT	STATE	SAMPLE SIZE	SAMPLING RATE	MODEL TYPE	METHODS	GPS SAMPLE
2010	North Front Range Metropolitan Planning Organization (NFRMPO)	CO	1,505	1.1%	Activity	Unknown	0%
2011	Community Planning Association of Southwest Idaho (COMPASS)	ID	2,000	0.9%	Trip	Phone, paper	0%
2011	Genesee Transportation Council (GTC)	NY	3,671	1.1%	Trip	Web, phone	0%
2011	Atlanta Regional Commission (ARC)	GA	10,278	0.6%	Trip/Activity	Web, phone, paper	10%
2011	Southeastern Wisconsin Regional Planning Commission (SEWRPC)	WI	16,500	2.1%	Trip	Unknown	0%
2011	New York Metropolitan Transportation Council (NYMTC)	NY	18,966	0.2%	Trip	Web, phone	10%
2011	Metropolitan Washington Council of Governments (MWCOC)	DC	4,800	0.8%	Activity	Phone, paper	0%
2012	Twin Cities Metropolitan Council	MN	10,362	0.9%	Trip	Web, phone, paper	0%
2012	Wasatch Front Regional Council (WFRC) and Utah DOT	UT	9,159	1.0%	Trip	Web, phone	0%
2012	Metrolina Regional Household Travel Survey	NC	4,231	0.9%	Activity	Phone, paper	0%
2012	Nashville Area Metropolitan Planning Organization	TN	6,500	2.6%	Activity	Phone, web	10%
2013	California Department of Transportation (CA DOT)	CA	42,000	0.3%	Activity	Web, phone, paper	13%

Name of the survey*	Year	Original focus	Location(s)	Period	Resolution: geocoding	Resolution: purposes	Persons	Trips
Uppsala Household Travel Survey	1971	Travel behaviour	Uppsala, Sweden	35 days	Building	All purposes	144	23,000
Mobidrive: Dynamics and routines of travel behaviour	1999	Stability of temporal patterns	Karlsruhe and Halle, Germany	42 days	Street block	All purposes	361	52,000
Borlänge GPS study (ISA Rätt Fart)	2000-2002	Speeding behaviour	Borlänge, Sweden	Up to 80 weeks	Trip ends: GPS; unique locations: pre-defined clusters of trip ends	Unknown, potentially all	189 veh **	240,000 car trips
Leisure study (SVI Gesetz-mässigkeiten des Wochenend-Freizeit-verkehrs)	2002	Leisure travel behaviour and activities	Zürich, Switzerland	84 days	Post-code level	31 leisure purposes	75	9,900 leisure activities
Thurgau diary (SVI Study of the stability of transport behaviour)	2003	Stability of temporal patterns	Frauenfeld and villages in the Swiss canton of Thurgau	42 days	Building	All purposes	230	37,000
Copenhagen GPS study (AKTA Road Pricing Experiment in Copenhagen)	2001-2003	Route choice under road pricing	Copenhagen, Denmark	18-24 weeks	Trip ends: GPS; unique locations: pre-defined clusters of trip ends	Unknown, potentially all	500 veh.	250,000 car trips
Atlanta GPS study (Commute Atlanta Study)	2004-2006	Travel behaviour; test of policy measures such as pricing	Atlanta, USA	Up to two years	Trip ends: GPS; unique locations: pre-defined clusters of trip ends	Unknown, potentially all	Approx. 500 veh.	Approx. 1,000,000 car trips

Emerging data sources

- **data of passively generated**

- *mobile phone data*
 - *CDR*
 - *sightings*
- social media data
- transit smart-card data
- taxi data

Call Detail Record

X	Y	ID	TIME	DURATION (sec)
195925	32464	J000001	82141	81
195925	32464	J000001	82456	75
195018	31555	J000002	82100	140

Number_1	Number_2	Call type	Date	Time	Duration (sec)

Sightings data

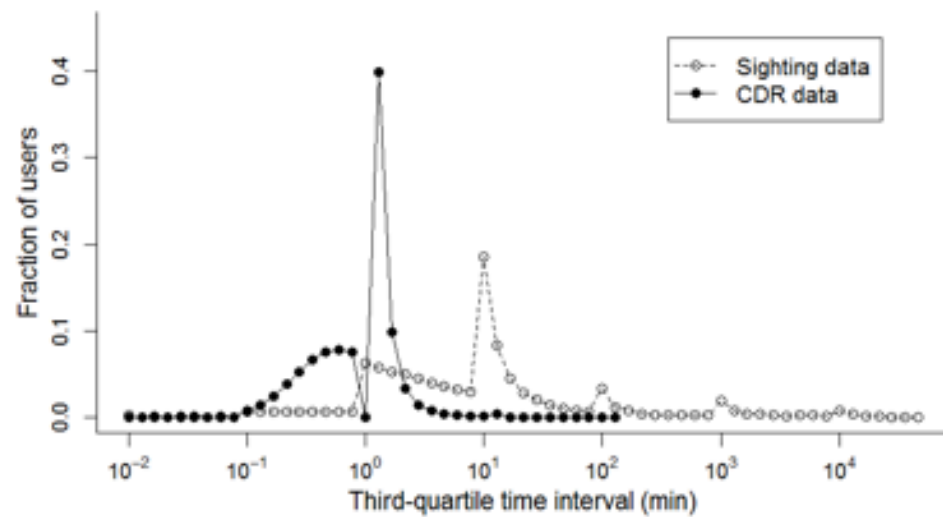

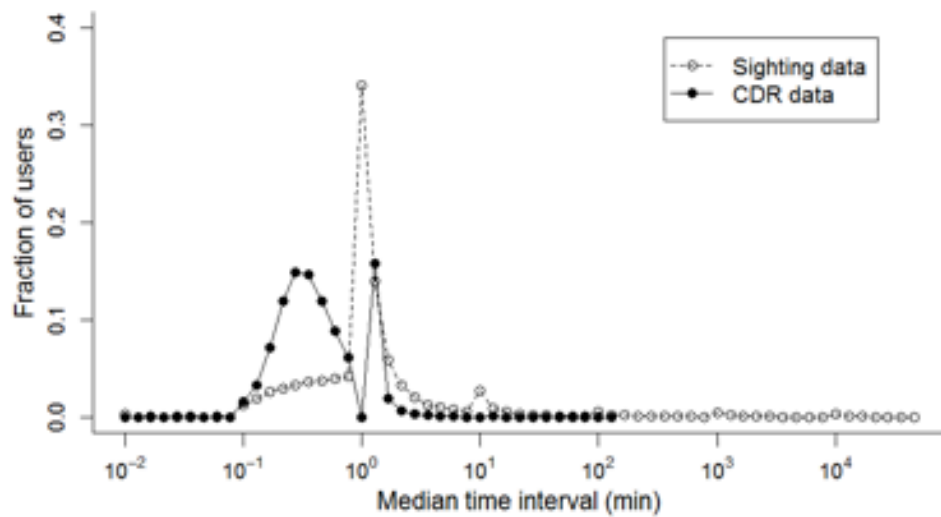

ID	TIME ^a	LOCATION ^b
3X35E90	1319242582	34.044162 -112.454400
3X35E90	1319242583	34.044059 -112.455550
3X35E90	1319301785	34.044392 -112.453519

Some differences

- temporal resolution
- spatial resolution
- user interactions

Concepts and measurements

Household travel surveys

Travel as a derived demand

What is a trip?

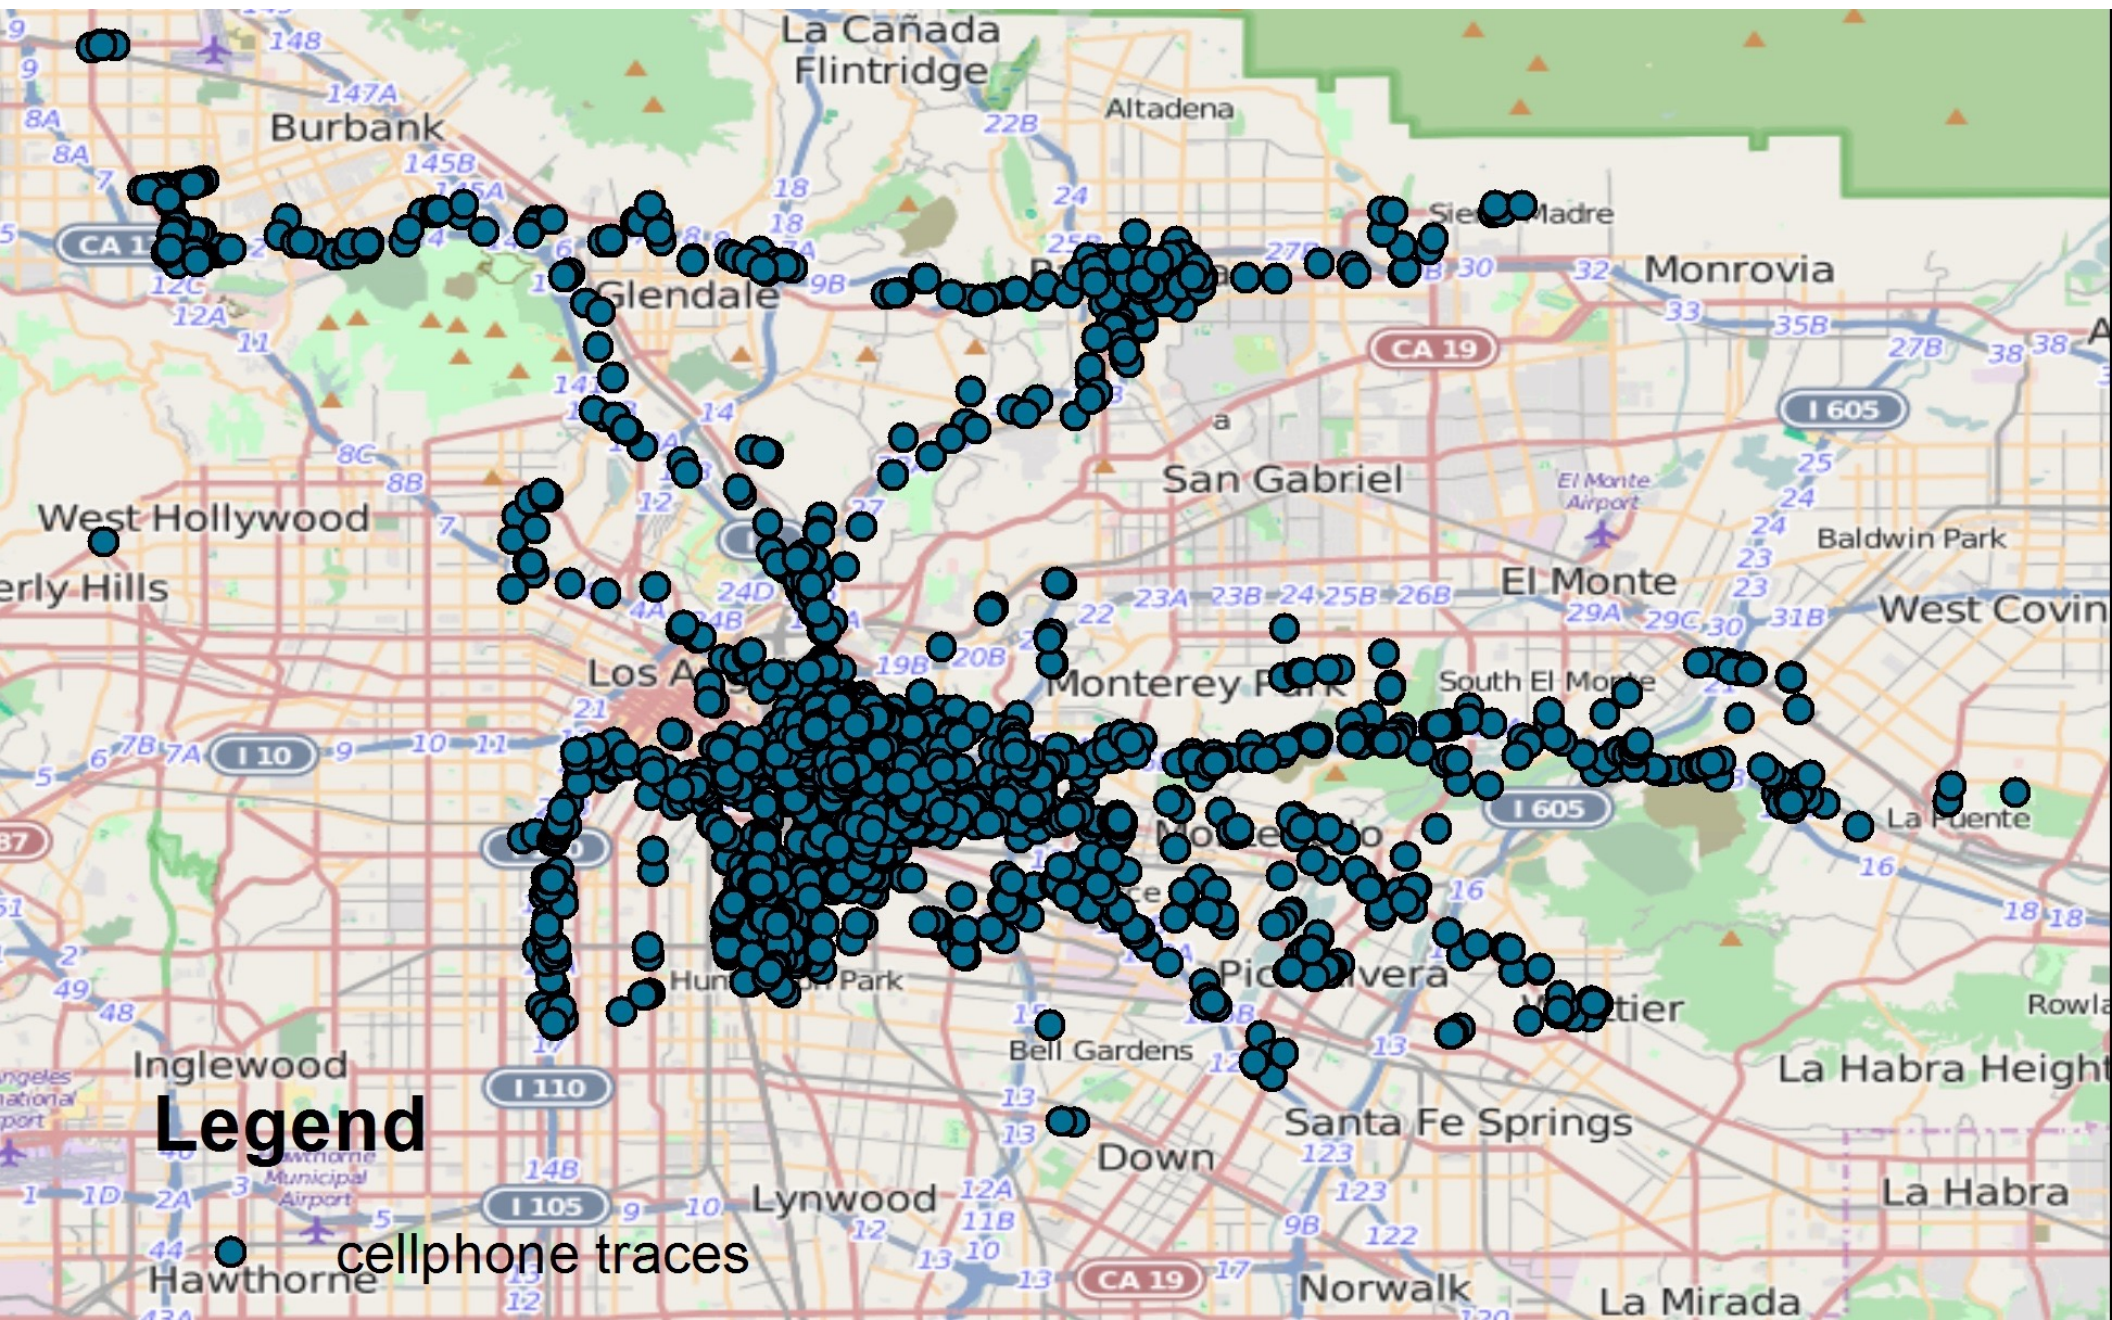

- A movement between two activity locations
- Definition of a trip depends on the definition of “*what is an activity*”
 - kinds of activity and purposes
 - duration
 - effort required to undertake the activity (e.g, physical or monetary)
 - group size and composition
 - urgency of activity
 - etc.

*Passively generated
mobile phone data*

Oscillation

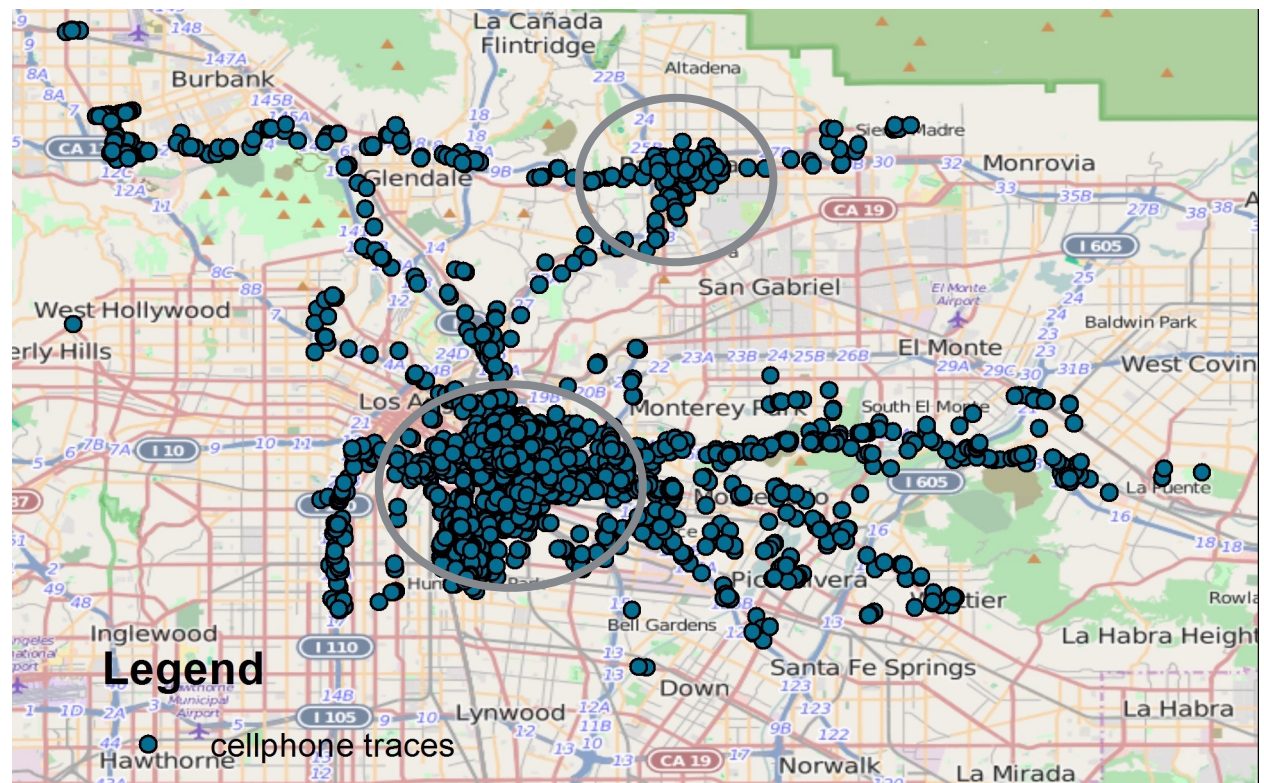

From traces to locations

Methods

- frequency-based
- clustering
 - distance based
 - time based
- density based
- model-based

Inferring types of locations

Methods

- frequency-based
- behavior-based
- model-based

Inferring mode and route choices

Route choice

- use intermediate points between O-D
- not use intermediate points (apply assignment techniques)

Mode choice

- speed-based

Validation: nearly NONEXISTENT

A FEW EXAMPLES

- comparing two different populations
- comparing between different scales (individuals vs regional levels)
- comparing the same sample, the same level (individual levels), using a simulation dataset

Movement patterns

Results from TB literature

- habitual or routine behavior
- rhythmic patterns
- variability
- equilibrium of behavior
- dynamics
- variety seeking

(Ir)regularity in travel behaviors

What has been measured?

- *daily trip rates*
- *daily trip distances*
- *action space*
- *activity time use*
- unique trip sequences
- similarity indexes

significant repetition
and variation

a Two-person household.

Susan Hanson et al (1980s)

- habitual and routine behavior dominates
- developed similarity indexes that reveal little similarity in the behavior of a single traveler on different days

Mahmassani et al (1990s)

- day-to-day dynamics on departure time choice, trip training and route choice
- stronger propensities for changing route choices than departure time choices

Axhausen et al (2000s)

Daily shopping

Long-term shopping

Private business

Club meeting

Active sports

Meeting family or friends

Going for a stroll

Going out (bar, restaurant, cinema)

Activity type									
Covariate	Daily shopping	Long-term shopping	Private business	Meet family/friends	Club meeting	Active sports	Excursion into nature	Going for a stroll	Going out (bar, restaurant, etc.)

McFadden's rho ¹	0.01	0.00	0.01	0.02	0.02	0.03	0.08	0.12	0.02

Spatial behaviors

- destination choices, and
- the broader spatial opportunities

Hagerstrand's 3 constraints

- capacity
- coupling
- authority

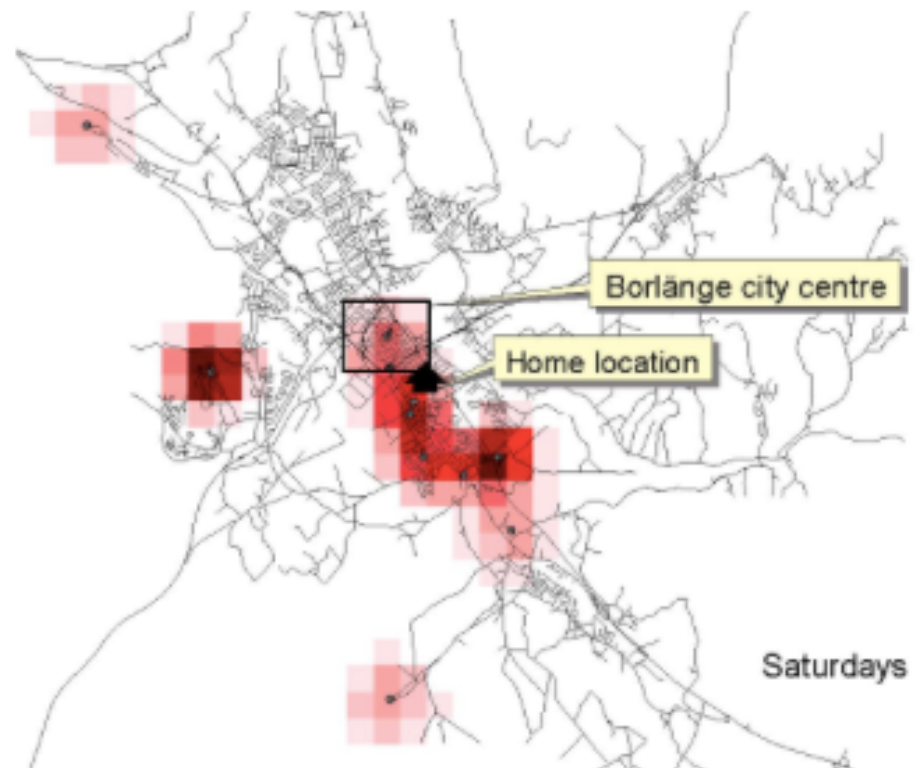

Kwan, 1999

long-term

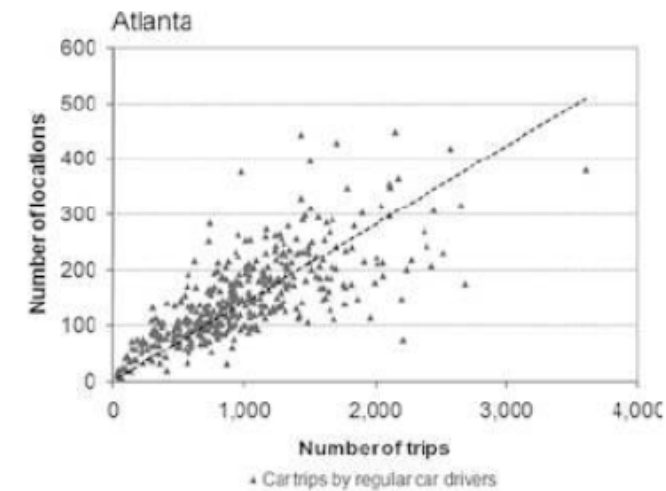

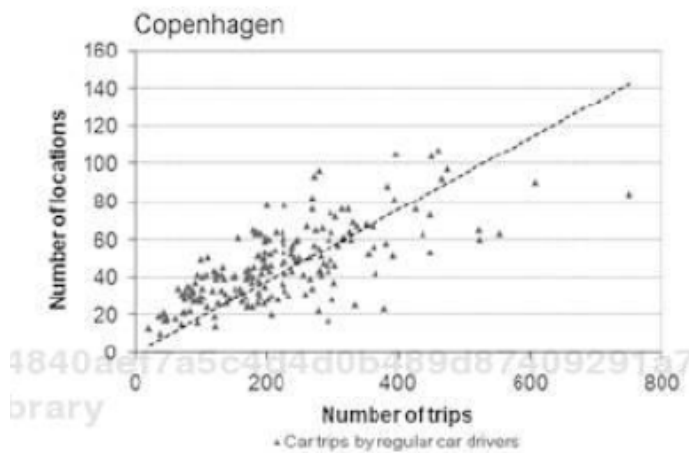

- residential location
- job location
- transit pass purchase
- vehicle transactions

short-term

- activity type
- mode choice
- destination choice
- activity duration
- departure time
- route choice
- scheduling and rescheduling

Measurement of human activity space

- enumeration of trips and/or unique locations
- continuous representation of use of spaces

Mean shares of trips to 10 most frequently visited locations

Dispersion of locations visited

Kernel densities by day of the week

Area covered*

* Cells of positive kernel density

Volume

Area covered*

* Cells of positive kernel density

Volume
